

Break free from the XProtect grid. Lay out cameras exactly as you want.

The Miletech Custom Views Plugin replaces the fixed Smart Client grid with a free-form canvas. Position and resize each camera view independently, overlap them for picture-in-picture, mix aspect ratios in the same layout, and build it all with a visual drag-and-drop editor in the Management Client.

Key features

Free-Form Layouts

Place views anywhere on the canvas, free of the rigid grid, and resize each one independently.

Drag-and-Drop Editor

Move, resize and arrange views in the Management Client with live visual feedback.

Overlapping Views

Stack views for picture-in-picture, overview-plus-detail or any layered arrangement.

Pixel-Perfect Sizing

Exact pixel dimensions per view block, for video walls and control room stations.

Grid and Free Mode

Uniform grid mode for quick layouts, free mode for complete control. Switch at any time.

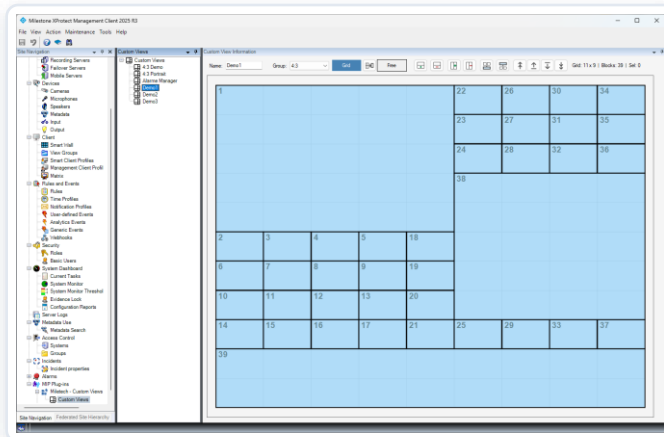

Multiple Aspect Ratios

16:9 and 4:3 in the same layout. Mix camera formats without compromise.

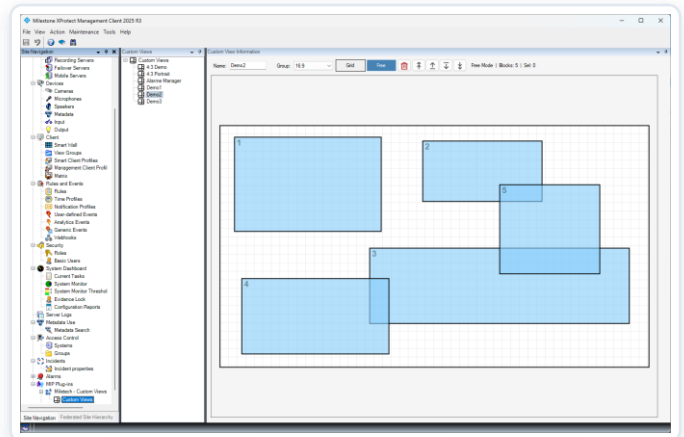

Works with any camera connected to XProtect, whatever the brand or resolution.
